Premiere: VASCULAR INTERNATIONAL presents the world's smallest hands-on educational tool for surgeons at CX London 2016

This brand new model is revolutionary. It is small, easy to carry and easy to use for all kinds of training purposes. Due to its two battery powered pumps (one with pulsatile, the other with steady flow) it can be used independently at any place. The wound depth can be adjusted for different training needs. The available inlays can simulate a wide range of body areas (silicon based or life-like bio tissue with embedded inlays). The affordable price makes the purchase possible not only for hospitals, universities and training institutions but also for surgeons and nurses of all medical fields for their individual education.

How can the vi-box be used?

The new vi-box is a unique universal tool for all procedures involving all kinds of tissue dissection and reconstruction such as non-vascular procedures: hernia repair, abdominal closure and all sorts of arterial venous and arterial construction.

About VASCULAR INTERNATIONAL

The VASCULAR INTERNATIONAL Foundation and School (VI) is committed to the idea of an enhanced training and learning of vascular surgical techniques using lifelike models. With maximised patient safety as priority, it is the goal of the VASCULAR INTERNATIONAL Foundation and School to constantly improve vascular surgery training in order to support the safe and efficient open vascular and endovascular patient care.
